Bronze Medal

World Youth Fly Fishing Championship, Czech Republic 2024

The Czech Republic team won bronze medals.

Silver Medal

World Fly Fishing Championship, Slovakia 2023

Silver team
Czech Republic.

Bronze Medal

World Masters Fly Fishing Championship, Czech Republic 2024

The Czech Republic team won bronze medals.

In the individual events, Bořek Kopecký won a silver medal and Marek Macka a bronze.

Superb XPG Graphene

New

A brand new series of four-piece rods that are both extra light, soft and extremely powerful. As the successor to the popular XP series it is improved using cutting-edge Hexagon Graphene+ material. The Superb XPG are our the most powerful and fastest rods. They were designed, continuously tested and fine-tuned to perfection by the world's top fly fishermen. Thanks to the use of the most modern technologies, materials and extra light super quality components, the weight of the rods has been significantly reduced. These rods are up to 30 g lighter than conventional rods.

The exclusivity of the rod is underlined by the use of first-class components: extra thin and strong SIC stripper guides which prevent tangling and provide smooth line flow, very durable and flexible titanium single leg Recoil Titanflex guides that are perfect for long-lasting performance, exclusive black reel seat in hexagon design (similar to the structure of the Graphene material) with an exotic wood insert, offers a luxurious and functional look, and the top quality AAAA cork ensures a comfortable and reliable grip. The blank of these rods is dark gray, unpainted and unsanded - this minimizes the end of leaders the sticking to the rod (especially in the rain) and it maximizes the performance of the blank.

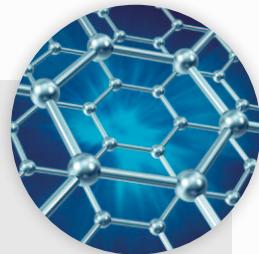

Models 3116, 4106, 4110, 596, 5100, and 5106 are equipped with a small fighting butt.

Superb XPG

699 €

Graphene is the thinnest material used with the thickness of a single atom layer arranged in the hexagonal lattice. Thanks to this structure, it is incredibly light and it has approximately 200 times higher tensile strength than steel.

Exclusive details in exotic rosewood

Special ANT (anti tangle) stripper guides and hook keeper prevent tangling of thin leaders.

Flexible titanium single leg guides RECOIL Titanflex - made in USA. The first two guides under the tip have a serpentine design to reduce tangling of thin rigs.

Each rod is supplied in the pentagon rod tube with the separate compartments for each rod section.

The rods are equipped with red tied marks for simple measurement of fish.

Superlight USG Graphene

A completely innovated series of legendary Superlight rods. This is a new series of four-piece ultra-slim, extra-light, very sensitive and also powerful rods. They have been designed, continuously tested and fine-tuned to perfection in close cooperation with multiple world champion Tereza Rutová with the aim of creating the finest and slimmest competition rods possible. Furthermore, František Kouba, Miloslav Hosenseidl, Vojtěch Ungr, Roman Heimlich, Luboš Roza, Ivan Vančura and František Hanák helped in the development and active testing.

Thanks to the use of the most modern technologies and the revolutionary material Hexagon Graphene, it was possible to reduce the thickness of the new blanks by an incredible 10 % compared to the original Superlight blanks while maintaining a similar action. It was possible to reduce the weight of the rods by approx. 30 % (up to 30 g) compared to ordinary rods thanks to the use of extra light and high quality components.

Exclusive design with lots of smart improvements. The blank of these rods has a luxurious matte gray colour. Original custom reel seat in hexagon design (similar structure of Graphene material) with exotic rosewood insert. Top quality AAAA cork.

Superb SWG Graphene

An innovated line of the legendary Superb SW rods. This is a completely new series of four-piece extra powerful, light and at the same time sensitive rods. They are our best competitive fly rods for streamer and lake fishing. The bonus is the possibility of use for saltwater fly fishing thanks to all saltwater-resistant components. Rods were designed, continuously tested and fine-tuned to perfection in close cooperation with one of the best current competitive fly fishermen Luboš Roza (multiple world and European Champion) and with trophy fishing experts František Hanák. Furthermore, Miloslav Hosenseidl, Jaromír Šram and Josef Hanák helped with the development and active testing.

Thanks to the use of the most modern technologies and the revolutionary material Hexagon Graphene and the use of extra light and super quality components, it was possible to significantly reduce the weight of these rods.

Super thin and strong stripper guides. Very durable and flexible titanium single leg guides RECOIL Titanflex. Exclusive, reliable, saltwater-resistant reel seat. Top quality AAAA cork. Precise design with a blank in the luxurious dark blue colour of the night sky.

Superb RS Graphene River & Stillwater

A completely new series of four-piece, ultra-light, slim, very fine and at the same time high-performance rods. They were designed, continuously tested and fine-tuned to perfection by one of the best current competitive fly fishermen Luboš Roza (multiple world and European Champion) in close cooperation with trophy fishing expert František Hanák. This new range also includes special and highly sought-after models for dry fly in the uniform length 9,3 ft - 282 cm - Superb RS Dry Fly 393, 493 and 593.

Thanks to the use of the most modern technologies and the revolutionary material Hexagon Graphene and the use of the extra light and super quality components, the weight of these rods has been reduced by about 30 % (up to 30 g) compared to ordinary rods. The slight departure from conventional lengths follows the global trend of using longer rods while maintaining the maximum performance of these models.

Exclusive design with lots of smart improvements for the 25th anniversary of our company HANÁK Competition.

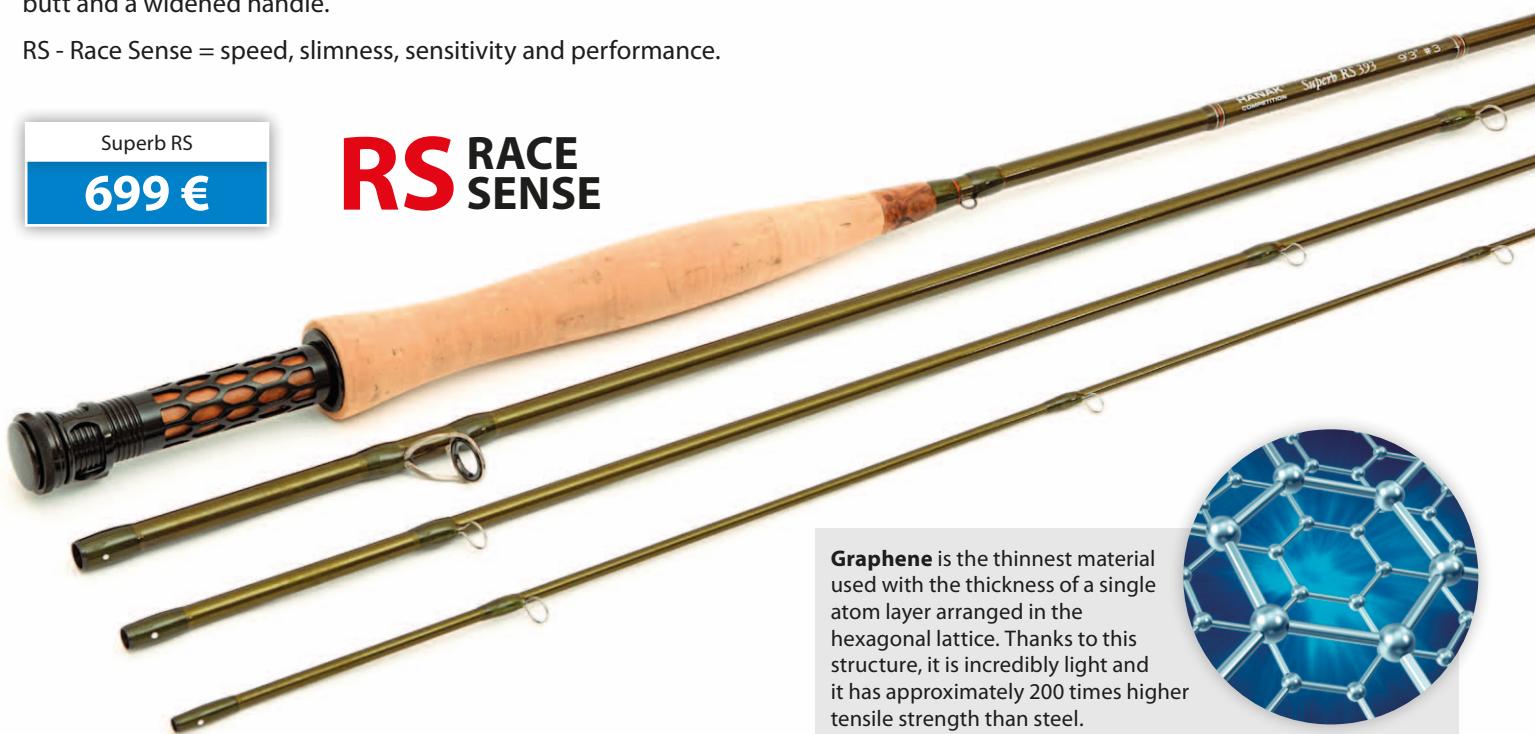

The blank of these rods is olive gold. Exclusive black reel seat in hexagon design (similar to the structure of the Graphene material) with an exotic wood insert. Top quality AAAA cork. Stillwater models 698 and 798 are equipped with the fighting butt and a widened handle.

RS - Race Sense = speed, slimness, sensitivity and performance.

The development of the Superb RS series began 10 years ago with the successful testing of the Superlight models during our victory at the Norwegian Open Championships 2012 and subsequently at the World Championships held also in Norway in 2013. The next step led to the currently very successful and popular model Superb XP and now three years of intensive development and rigorous testing resulted in the Superb RS Graphene! Luboš Roza was responsible for the development of the River edition of the Superb RS Graphene series (AFTMA models # 2 and # 3) and Stillwater 698 and 798, while František Hanák focused on the development of the Graphene Trophy series (AFTMA models # 4 and # 5).

Stillwater X 696, 796 & 7100 & Streamer X 690

New

A new generation of proven Stillwater and Streamer rods. They are the result of long-term intensive development and testing in cooperation with top Czech fly fishermen. The quality that has been proven by many competition winners is now available to all fly fishermen. Originally designed for still water fly fishing, but the 690, 696 and 796 versions are also suitable for streamer fishing. Precise processing, the use of high-modulus carbon and quality components give these rods an exceptionally fast action, extending the casting distance and increasing the success of hooking and landing a fish. Cork fighting butt supports and extends the handle for greater comfort when casting and playing a fish. Travel-friendly length makes them ideal for anglers on the go. All rods are supplied with a fabric cloth bag and durable tube.

Superb Sea Trout 696 & 796 Graphene

New

A completely new pair of four-piece, high-performance rods designed specifically for sea-trout fishing. Thanks to the use of saltwater-resistant components, they are also perfectly suited for saltwater fly fishing. The rods were designed, continuously tested, and fine-tuned to perfection in close cooperation with British sea-trout expert Rob Redman, and they successfully passed extreme testing in Iceland (František Hanák, Josef Hanák, Luboš Roza, Olafur Hilmar Foss). Additional development and testing in the Czech Republic was supported by Miloslav Hosenseidl. By using state-of-the-art technologies, the revolutionary Hexagon Graphene material, and ultra-light, high-quality components, the weight of these rods has been significantly reduced. They are equipped with two super-strong ANT (anti-tangle) stripping guides, reinforced snake guides, and an extra-large reinforced tip guide. The rods feature reliable black anodized aluminum reel seats resistant to saltwater and AAAA-grade cork. Both the front grip and the fighting butt are reinforced with composite cork. The overall design is completed by a dark-blue blank with red fish-measuring reference marks at 60, 80, and 100 cm.

Superb LAX 8100 Graphene

New

František Hanák, Iceland 2024

All-new four-piece very light and extra powerful rod. Completely designed by František Hanák using the most up to date technology and highest quality material available. Tested and fine-tuned to absolute perfection on the Rio Grande, Argentina. An unrivalled single handed fly rod specifically designed for trophy sea trout and salmon. All components are saltwater resistant, so, perfect for saltwater fly fishing. The blanks were made by using the latest HI-CARBON technology and material in a special combination with NANO top-class filaments. Combining these blanks with extra light super quality components, we have succeeded in the drastic reduction of the overall weight of these rods. The rods have super thin SiC stripper guides and very durable and flexible titanium single leg guides RECOIL Titanflex. The perfect design of the rods is underlined by the exclusive black saltwater resistant reel seat. The handle is made of the highest quality AAAA grade cork. The blank is in a dark blue colour.

Sea Trout 896 & 8100

A very special powerful rod made of high quality modulus carbon. This rod was originally designed for sea trout fishing at the Danish coast, however it can also be successfully used for targeting other big fish such as pike. An exceptional rod action and high quality components both help to increase the hook up ratio to subdue and land even the strongest fish.

A full-wells quality cork handle with fighting butt increases comfort during casting and helps you tame that fish of a lifetime.

Superb Predator 1090 Graphene

New

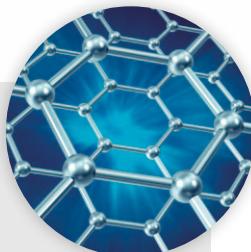

A completely new, high-performance rod designed for targeting both freshwater predators - such as pike, huchen, and catfish - and, thanks to its saltwater-resistant components, also ideal for saltwater fly fishing, including tarpon, snook, bonefish, and various species of jack. The rod was designed, continuously tested, and fine-tuned to perfection in close cooperation with our saltwater-fishing experts: František Hanák, Josef Hanák, Jaromír Šram, and Igor Slavík. Its qualities were further proven through successful extreme testing in Cuba, Venezuela, Nicaragua, Finland, the Netherlands, Austria, Slovenia, and the Czech Republic. By using state-of-the-art technologies, the revolutionary Hexagon Graphene material, and ultra-light, high-quality components, the weight of the rod has been significantly reduced. It features three super-strong ANT (anti-tangle) stripping guides, with the two largest double-wrapped to prevent blank compression during extreme fighting, reinforced snake guides, and an extra-large reinforced tip guide. The rod is equipped with a reliable black saltwater-resistant reel seat and AAAA-grade cork. The front of the handle and the fighting butt are reinforced with composite cork. The overall design is completed by a dark-blue blank with red fish-measuring reference marks at 75, 100, 125, and 150 cm.

Superb XP

A series of four piece, ultra-light, very fine yet powerful rods. They are the best competition fly rods. These rods were designed by using the newest technology and highest quality materials available. These rods have been long-term tested and fine-tuned to absolute perfection in cooperation with the best fly - fishermen and competitors in the world. As well as members of Team HANÁK Competition SUPERB STARS, mainly members of the Czech National Fly Fishing Team. Each rod was designed and tested separately by the best fly- fishermen in each discipline of fly-fishing.

Blanks were made by using the latest HI-CARBON technology and material in a special combination with NANO top-class filaments. Combining these blanks with extra light, super quality components, we have succeeded in reduction of the overall weight of these rods by about 30 % (up to 30 g) compared to conventional rods. The rods have super thin, durable FUJI SiC stripper guides and RECOIL Titanflex flexible single leg guides. The perfect design of the rods is underlined by the exclusive black reel seat with an exotic wood insert. The handle is made of the highest quality AAAA grade cork. The matt gold olive finish of the blank prevents the disturbance of spooky fish by reducing rod flash.

Superb XP 4110

Bernd Keplinger

- Austrian expert of fly-fishing for trophy fish

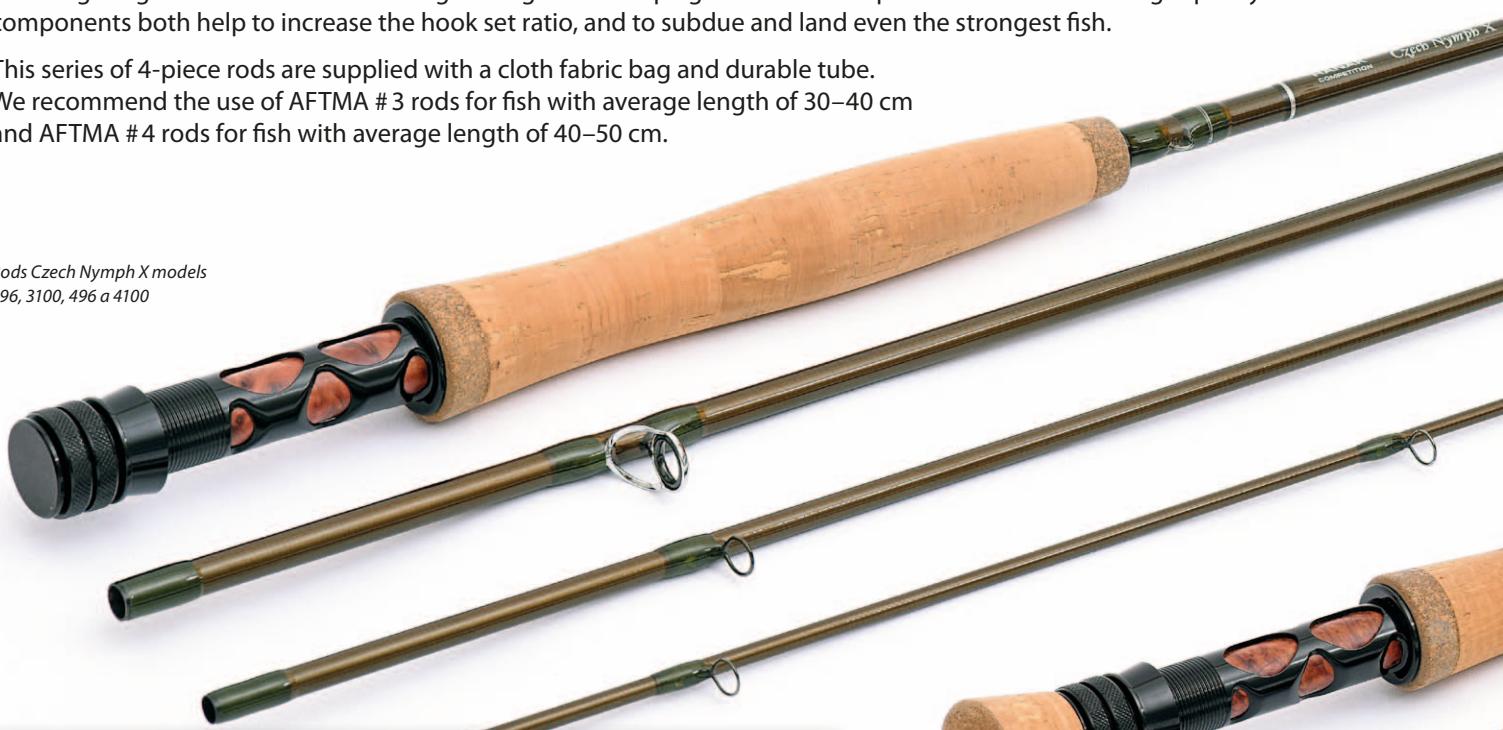

Czech Nymph X

A series of special fly fishing rods developed mainly for nymphing with different leaders. The 290 cm rods are also suitable for dry fly and wet fly fishing. Rods are made of high modulus quality carbon and equipped with reversed half wells grips made of high quality cork and light dark single leg fly guides. The 320 cm rods are also equipped with a cork fighting butt to balance rod during casting and to help fight the fish. Exceptional rod action and high quality components both help to increase the hook set ratio, and to subdue and land even the strongest fish.

This series of 4-piece rods are supplied with a cloth fabric bag and durable tube.

We recommend the use of AFTMA # 3 rods for fish with average length of 30–40 cm and AFTMA # 4 rods for fish with average length of 40–50 cm.

Czech Nymph Champion 4 in 1

Universal rods made of high modulus quality carbon. Thanks to its special construction, you can put together the rod in four different lengths for different conditions and different fly-fishing methods. Usage of high quality components and exceptional rod action increases the success rate of strikes and helps to land a fish. The 6-pieces construction is suitable for traveling and storage. The rod has a reversed half wells grip made of high quality cork and single leg fly guides.

Rods from the Czech Nymph Champion 4 in 1 series are supplied with a fabric cloth bag and durable tube.

Alpen Nymph 4 in 1

Series of high-powered rods made of high modulus quality carbon designed to fish for very shy and trophy fish in the mountain rivers in the Alps (Austria, Germany, Italy, France, Slovenia, Switzerland...), Scandinavia and New Zealand. Thanks to its special construction, you can put together the rod in four different lengths for different conditions and different fly-fishing methods.

Usage of high quality components and exceptional rod action increases the success rate of strikes and helps to land a fish. The 6 piece construction is better for travel and storage. Reversed half wells grip from high quality cork and single leg fly guides.

Wave Nymph

A brand new series of 4-piece fly rods specially designed for nymphing. The special rod construction enables the use of very fine tippets and small nymphs. It also increases the hook up ratio and helps with both subduing and landing every fish.

Rods in lengths 275 cm and 290 cm are also suitable for dry fly and wet fly fishing. This range has a half-wells cork handle, aluminium reel seat with graphite insert and single leg guides. Each rod is supplied with a cloth fabric bag.

Wave Pike 990 New

A completely new, performance rod designed for targeting freshwater predators such as pike, huchen, and catfish. It was designed and continuously tested by our experts in this style of fishing: Martin Vlk, Igor Slavík, František Hanák and Filip Apjár. The rod features two large, durable ceramic stripping guides, reinforced snake guides, and an extra-large reinforced tip guide. It is equipped with an aluminum reel seat and a full wells cork handle with a fighting butt. The blank comes in a dark-blue finish with white fish-measuring reference marks at 60, 80, and 100 cm.

Model	Length	Transport length	AFTMA	Number of pieces	Weight
Wave Pike 990	275 cm	73 cm	# 9	4	122 g

Wave Pike 990

199 €

The rods are equipped with red tied marks for simple measurement of fish.

0 cm

60 cm

80 cm

100 cm

Marks are only indicative for a quick estimate of the length of the fish and it does not perform the function of a precision gauge.

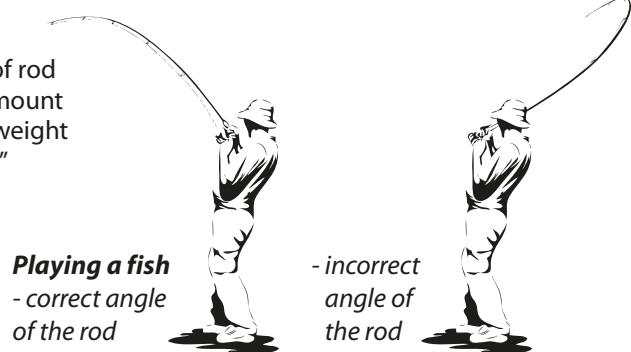

Rod size selection according to the average size of target fish on rivers

The reason I am writing this brief universal tutorial about the selection of rod weights to suit both conditions and size of targeted fish, is due to the amount of people asking me the same question over and over again: "What # 3 weight rod do you recommend for targeting trophy rainbow and marble trout?"

The answer is easy – NONE!

Here is my recommendation:

- Target fish up to 30 cm - rod weight AFTMA # 2
- Target fish 30–40 cm - rod weight AFTMA # 3
- Target fish 40–50 cm - rod weight AFTMA # 4
- Target fish over 50 cm - rod weight AFTMA # 5

Of course, even with a 3 weight rod you can tame a trophy sized fish over 60 cm, but in the process you will overload the rod (which can snap the rod). However, by prolonging the fight you can over play the fish which could lead to exhaustion and significantly decrease its chance of survival when released. Important factors for selection of rods are also the species of target fish, strength of the current and diversity of the river bed. It is also necessary to choose appropriate strength of tippet and hook size. An exception to the rule with a completely different approach is competition fly fishing. With their experience and skills, top competitors can normally get a trophy fish in the net before it even knows its been hooked!

Rod lengths usually depends on the technique used, power of flow and how much room you have for casting and playing the fish.

Streamer - mostly 275 cm / 9 ft

Dry fly - 275 cm / 9 ft and possibly in large rivers 290 cm / 9,6 ft

Wet fly - mostly 290 cm / 9,6 ft and smaller streams even 275 cm / 9 ft

Nymphing - mostly 305 cm / 10 ft, according to conditions 275–335 cm / 9–11 ft

I wish you many wonderful experiences out on the water, and please, keep in mind, that if you catch a fish you don't want to be the last person that gets to release it back into its watery home!

Superb RS 13 & 35

Ultra modern all-metal extra-large-arbor reel made of aviation aluminium alloy in combination with elements made of stainless steel. Exclusive H-design commemorates the 25th anniversary of the founding of our company HANÁK Competition, while the hexagon pattern of turned holes refers to the structure of the Graphene, the latest top material used for building of our new Superb RS rods.

The large diameter of the spool reduces tangling of the leader and line and reduces their wear and speeds up winding. The precisely manufactured closed cage prevents long thin nymphing rigs from being pulled out of gaps between the reel and cage. Smooth running is ensured by a one-way roller super bearing. Unrivalled sensitive and precisely adjustable brake allows safe use of fine tippets.

The reel was designed, continuously tested and fine-tuned to perfection by one of the best current competitive fly fishermen, Luboš Roza (multiple world and European Champion) in close cooperation with trophy fishing expert František Hanák.

Superb H 13 & 35

The successor to the very popular Superb XP reel. Modern ultra-large arbor reel is produced by machine-cut 6061-grade air-aluminium bar stock in combination with stainless steel. Thanks to the large arbor design, it limits tangling, damaging of fly line and speed-up reeling. The unique closed cage prevents tangling and dragging fine long nymphing leaders out of the reel. Smooth function is guaranteed by two ball-bearings in combination with a super-roller bearing. The sensitive and reliable drag allows usage of fine leaders.

Barbless Hooks

The exceptional innovative design of our hooks incredibly increases the efficiency of strikes and the landing of fish. This effect is obtained by using High-carbon steel as well as the special shape of the hook which is finished with an extra-long needle point. Use of barbless hooks dramatically reduces damage to fish, limits injury and shortens handling time of fish being caught.

Hooks H 460 BLR Jig Superb RS

New

This jig hook, developed in collaboration with World and European Champion Luboš Roza, along with František Kouba and František Hanák, represents a cutting-edge design in the world of fly fishing. The hook is part of the innovative RS concept, paired with the new RS+ heads, offering a combination of enhanced performance and precision.

Key features of the RS concept and hook design:

- RS+ Concept:** The smaller, narrower slot on the RS+ beads allows for up to 20 % more head weight, providing better stability on hook and performance in the water.
- Maximum bead size on a smaller hook:** The new design allows for the use of a larger bead (up to size 3.8 mm) on the smallest hook (size # 20, H 460 BLR), achieving better results in terms of casting and performance.
- Specially bent eye:** The hook features a uniquely bent eye, perpendicular to the plane of the hook, improving its functionality during use.
- Compatibility:** While RS hooks can be used with a variety of beads, the best performance is achieved when paired with the RS+ beads, designed specifically for maximum efficiency.

Tungsten Beads RS+ New

The new Tungsten RS+ beads are a game-changer in the world of fly fishing, designed to provide enhanced performance with a focus on using larger beads on smaller hooks. The beads feature a narrower slot, which allows for the inclusion of more weight, up to 20 % higher compared to conventional tungsten beads of the same diameter. This increased weight improves the sinking speed and overall stability of the fly, which is crucial for precise casting, control of fly, take detection and hook setting. The RS+ heads can be paired with various hooks, they perform best when used with RS hooks, ensuring a perfect match between hook and bead for optimal results.

Tungsten Beads

The heads of flies play different roles during fishing, they attract fish by their flashes and colours, and thanks to their weight they enable the flies to sink quickly to the fishing zone and keep flies at the correct depth, where they are most effective. Tungsten has a density over 19 kg/dm³, which is nearly twice as much as lead. Therefore, your flies can be significantly smaller and slimmer while maintaining the same weight, and thus much more attractive to fish. Tungsten flies are absolutely essential for fishing in deep pools and fast streams.

9,90 €

Fluorocarbon

HANÁK Competition fluorocarbon tippet is ideal for fishing for spooky fish thanks to its revolutionary attributes. It is almost invisible in the water, it sinks quickly as it is twice as heavy as water, it doesn't remain lying on the surface and spook the fish. Fluorocarbon is denser, smoother, doesn't soak up water, doesn't change its diameter and remains transparent. It is more durable and less elastic.

Proven top quality leader material in a cost-effective package. A blue elastic band prevents the tippet from tangling in your pocket or bag. The spools can be connected to each other.

How to reduce unnecessary damage to rods

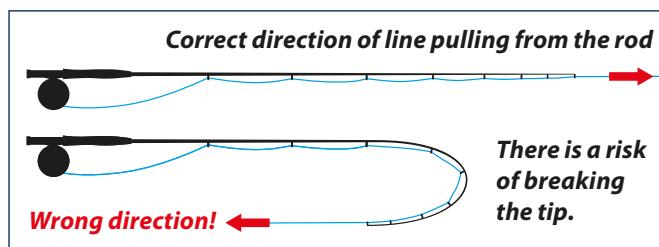

► **Correct Rod Selection.** Choose the right rod based on the target fish, the type of fly fishing technique, and the type of water you'll be fishing in. This ensures you're using the appropriate equipment for your fishing style and actual conditions.

► **Remove Protective Plastic from Cork Handle.** Don't forget to remove any protective plastic wrapping from the cork handle before using the rod. This allows for a secure and comfortable grip. Removing plastic also prevents cork from rotting.

► **Proper Assembly and Disassembly.** Assembly: Start from the tip and work your way down toward the bottom part of the rod. Disassembly: Always reverse this process by starting from the bottom and working toward the tip. This helps prevent any undue stress on the rod sections.

► **Don't Test the Rod Improperly.** Avoid swinging the rod without a line threaded through it or bending the tip by hand. These unprofessional handling practices can cause unnecessary damage to the rod. The rod is designed to handle the pressure of casting with a line and fighting fish, not bending without a line in place.

► **Correct Way to Pull the Line.** When threading the line through the rod tip, pull the line away from the reel (parallel to the rod), not toward the reel. Pulling in the wrong direction can lead to excessive friction and increase the risk of breaking the rod tip.

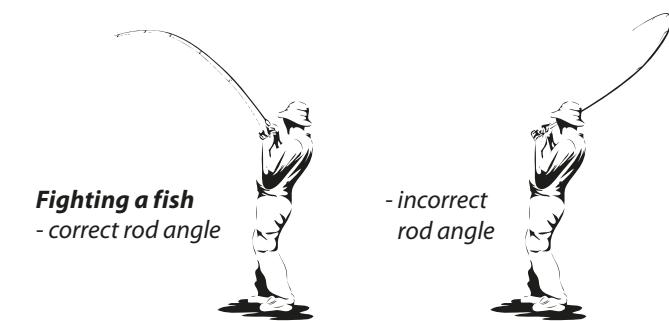

► **Be Mindful of Your Surroundings.** While casting, always check for nearby obstacles or branches that could damage your rod. During the fight with a fish, be aware of your surroundings to avoid swinging your rod into branches or obstacles. Also, be careful not to hit the rod with your flies while casting, as this can cause serious damage.

► **Safety with Electrical Conductivity.** Since your rod is graphite (electrically conductive), avoid handling it during thunderstorms or near power lines. This could result in dangerous situations, including the risk of fatal electric shocks.

► **Release Flies Carefully.** When releasing flies stuck at the bottom or in branches, never jerk the rod aggressively. Instead, unhook the fly smoothly by gently pulling it in the direction of the rod. This will help prevent unnecessary stress on the rod and avoid damage.

► **Proper Fish Fighting Technique.** Keep the rod bent at an angle between 45–60° while fighting the fish. This ensures that the load is evenly distributed along the entire rod. Avoid over-bending the rod, as concentrating the load at a narrow bend can cause breakage.

► **Use a Large Landing Net.** Using a large landing net with fine or rubberized mesh is gentler on the fish and reduces the fight time. This helps prevent over-exerting the fish, especially trophy fish, and allows for a quicker catch.

► **Check and Maintain Rod Connectors.** Regularly check the rod connectors, as they can loosen during casting. This is especially important during techniques like nymphing or dry fly fishing. Use a small amount of Loon Graffitolin Ferrule Wax on the connectors to ensure smooth assembly and prevent jamming.

► **Regular Cleaning and Drying.** After fishing, clean and dry the rod thoroughly. Moisture can lead to mold, and dirt can cause scratches or poor fit at the connectors. Always store rods in a dry place when not in use, especially before winter or extended breaks.

► **Winter Fishing Tip.** For winter fishing, use Loon Stanley's Ice Off Paste to prevent your guides from freezing in cold weather.

By following these tips, you'll help extend the life of your rod, improve its performance, and avoid costly repairs. Proper handling and maintenance are key to ensuring your rod stays in excellent condition season after season.

Service, Maintenance and Spare Parts

Reels

Reels must always be gently cleaned and naturally dried after fishing to keep their usage reliable and almost maintenance-free. Reels must be protected from sand, mud, intense heat, frost and impacts. Do not immerse reels needlessly into water, especially not into muddy water. Reels must be transported and stored in the protective packaging and in a dry place. For long term storage, release the drag completely.

Reels are already professionally lubricated at the factory. During the warranty period, unprofessional disassembly, repair or modification is not allowed. This could cause loss of the warranty and possible loss of reel components. For intensive use we recommend to gently apply 1-2 drops of special lubricating oil (eg. Loon Reel Lube) mainly to the one-way bearing annually. Improper lubricating oil or grease, or excessive unprofessional lubrication can damage the reel.

All our reels are designed exclusively for freshwater use.

Always contact our professional team for warranty and post warranty service and repairs including professional cleaning and lubrication.

Rods

When assembling rods, pay attention to the cleanliness of the connected parts (carefully remove any dirt or impurities) and push the parts together with adequate (not excess) pressure along the axis of the guides. For multi-part rods, start at the tip and continue gradually towards the handle. While fishing, check the fitting of the individual parts in the joints, which can slacken during casting and subsequently damage (destroy) both ends.

Use only the recommended fly lines of the appropriate AFTMA and do not overload the rod (see page 33). When packing the rod, release the individual parts of it by pulling in the axis of the guides. It is always necessary to gently clean the rods and let them dry naturally after fishing. Protect rods from sand, mud, intense heat, frost and impacts. Do not needlessly immerse rods in water, especially not muddy water. Always transport or store rods in their protective packaging and in a dry place.

All our rods are made of graphite, ie there are electrically conductive, so do not handle them during thunderstorms or near power lines - fatal injuries can occur!

Always contact our professional service for warranty and post-warranty repairs.
